PROJECTS

Chatify [🔗](#) | React, Redux, Material-UI, Express, Mongoose, Socket.io

2024

- Real Time Chat application where you can create different Rooms and chat with your friends
- At a time only two people are allowed in the room.
- Chats of a particular room are saved in the Database and anytime you can retrieve it by providing the correct roomid and delete it.
- Users have a option of leaving and again joining the room.

Foodizz [🔗](#) | React, Redux, Material-UI, Express, Mongoose, Moment.js

2023

- You can sign in to this Food app where **customer** and **Admin** have different access to different pages.
- **Admin's** role is to add different foods in the database.
- One extra option is there to update your password if you have forget your password
- More features about this features you can find in the Readme file in my Github repository
- Customer can view different categories of food and add it to their cart. The cart of a particular customer is saved even after they log out from the app.
- Customer can add limited no of items in the cart.
- Items can be deleted from cart and discount is given if order goes over the benchmark value during checkout
- To know more about the project click on the arrow icon
